PREFACE

This report presents a profile of the supply and distribution of physicians licensed in New York. The report presents data collected via the Center for Health Workforce Studies' New York State Physician Licensure Re-registration Survey in 2004 and 2005. This report presents physician workforce data at several aggregate levels, including the state, region, county, and specialty. The report is intended to provide useful information for policy makers, educators, and other interested parties across the state.

This report was prepared at the Center for Health Workforce Studies at the University of Albany, State University of New York. The Center is dedicated to the collection, analysis, and distribution of health workforce data to assist health, professional and educational organizations, policy makers, and the public understand issues related to the supply, demand, distribution, and use of health workers. This report was prepared by David P. Armstrong and Gaetano J. Forte. The views expressed in this report are those of the Center for Health Workforce Studies and do not necessarily represent positions or policies of the University at Albany, State University of New York, the School of Public Health, the New York State Education Department, the Health Resources and Services Administration, and the US Department of Health and Human Services.

January 2006

ACKNOWLEDGMENT

Partial funding for this report was made possible through a cooperative agreement with the Health Resources and Services Administration. The authors wish to acknowledge the New York State Education Department for its aid in the data collection process that supports this work. The authors also wish to acknowledge the fine work of Claire Siconolfi in processing the data analyzed and presented in this report.

EXECUTIVE SUMMARY

This report summarizes the responses to the 2004-2006 Survey of Licensed Physicians in New York State, as adjusted to official counts of licensed physicians in 2004 and 2005. The estimated numbers of physicians and the profiles of their demographic characteristics are the latest available for the state of New York.

In addition to presenting basic data for the state as a whole, the report presents three series of statistical profiles, one for each of the New York State Department of Labor workforce regions, one for New York counties, and one for the medical specialties included in the 2004-2006 questionnaire.

A few of the most important findings of the study are summarized below:

- ❖ Of the 77,471 licensed physicians in New York, 80% (61,905) were active patient care physicians. Of these, 48% were located the New York City region, with the remaining 52% located across the rest of the state.
- ❖ The ratio of physicians per 100,000 population is highest in the New York City region, with 370 full-time equivalent (FTE) active patient care physicians per 100,000 population. The ratio is lowest in Mohawk Valley, with 147 FTEs per 100,000 population.
- ❖ Despite overall growth in the physician supply between 2000 and 2004, some regions experienced declines in the number of patient care physicians. The Finger Lakes and Western New York regions experienced physician declines of 6% and 10%, respectively, between 2000 and 2004.
- ❖ More than 18,000 physicians (30% of the total) listed one of the Primary Care Specialties (Family Practice, General Internal Medicine, and General Pediatrics) as their principal specialty.
- ❖ Between 2000 and 2004, primary care physician supply grew in all regions of the state except the Finger Lakes, North Country, Southern Tier, and Western New York regions. The change in primary care physician supply in these regions ranged from no growth in the Southern Tier region to an 11% decline in the North Country region.
- ❖ Non-primary care physician supply grew in all regions of the state except the Finger Lakes, Mohawk Valley, and Western New York regions. Declines of non-primary care physician supply in these regions ranged from 6% in the Finger Lakes and Mohawk Valley regions to 11% in the Western New York region.
- ❖ Physicians were predominantly male (71%). However, women physicians were significantly younger than men, reflecting the growing number of women entering the profession. The average age of female physicians was 42.8, versus 48.2 for male physicians.
- ❖ Over 70% of physician were white. Underrepresented minorities (African Americans, Hispanics/Latinos, and American Indians) made up 10% of the physician supply in 2004.
- ❖ The most common of the principal specialties listed on the questionnaire was General Internal Medicine with more than 9,500 active patient care physicians (17% of the total). This was followed by Psychiatry (10%), General Pediatrics (8%), and Family Practice (8%).

- ❖ Seventy-five percent (75%) of physicians indicated that they were certified by a nationally recognized member board of the American Board of Medical Specialties in their principal specialty. These figures varied significantly across specialties, from 51% in Occupational Medicine to 86% in Dermatology.
- ❖ Thirty-five percent (35%) of active patient care physicians reported that they were International Medical Graduates (IMGs), that is, they attended medical school in a foreign country (other than Canada). There were significant variations in the proportion of IMGs by specialty, with physicians in Physical Medicine and Rehabilitation reporting 52% and in Dermatology reporting fewer than 10%.
- ❖ Group practice was the largest principal practice setting in 2004 with 37% of responding physicians. Solo practice (28%) and Hospital practice (26%) were the next most frequent settings.

BACKGROUND

Physicians are central to the delivery of health care to the citizens of New York. This report provides a variety of numerical measures of the size and nature of the physician workforce in the state. An effort has been made to design the tables and the figures in the report to reveal patterns that can help planners and policy makers design programs to improve healthcare in the state.

Physician Data Files

In 2004, over 77,000 physicians held licenses from the New York State Education Department to practice medicine in New York. All physicians are required to register with the State Education Department every two years. The present registration cycle began in January 2004 and will last until January 2006. Included in each registration packet was a questionnaire (Appendix A) that requested responding physicians to provide information on a number of personal, professional, and practice characteristics. The responses to these questionnaires for the present cycle are the basis for the tabulations presented in this report.

Several files were created from the survey data, each including slightly different numbers of respondents. One of these files forms the basis of this report. File E, which includes all active full-time and part-time physicians that do not practice exclusively out of state, was used to examine the overall work profile of physicians active in medicine in New York. This file excludes medical residents since they are not required to be licensed and many of them are not eligible for licensure. The file also incorporates a weighting factor to account for non-respondents to the survey.

Important Notes

Due to the cyclical registration process in New York, the numbers reported in the following pages should not be viewed as a snap shot in time of the current physician workforce. Instead they should be considered as a general picture of the physician workforce over the two-year period of the registration process. For convenience, however, the numbers and tabulations reported reference the year 2004 since most of the data for the report was collected in that year. It also must be emphasized that the data presented in this report are estimates and are subject to a certain degree of error, especially in the case of rare events, small populations, and missing data. Finally, due to confidentiality agreements, cells with counts below 5 are indicated as “ -- ” throughout the report.

REGIONAL PROFILES

This section presents a series of statistical profiles, one for each of the ten New York State Department of Labor Workforce Regions in the state. In addition to basic counts and characteristics of physicians, the profiles present information on practice settings, board certification and residency training, and FTE counts by activity and specialty category in the Workforce Regions. The tabulations cover only active, patient care physicians and all of the figures exclude medical residents.

The map below shows the names and locations of each of the Workforce Regions. It also shows the counties that comprise each Workforce Region.

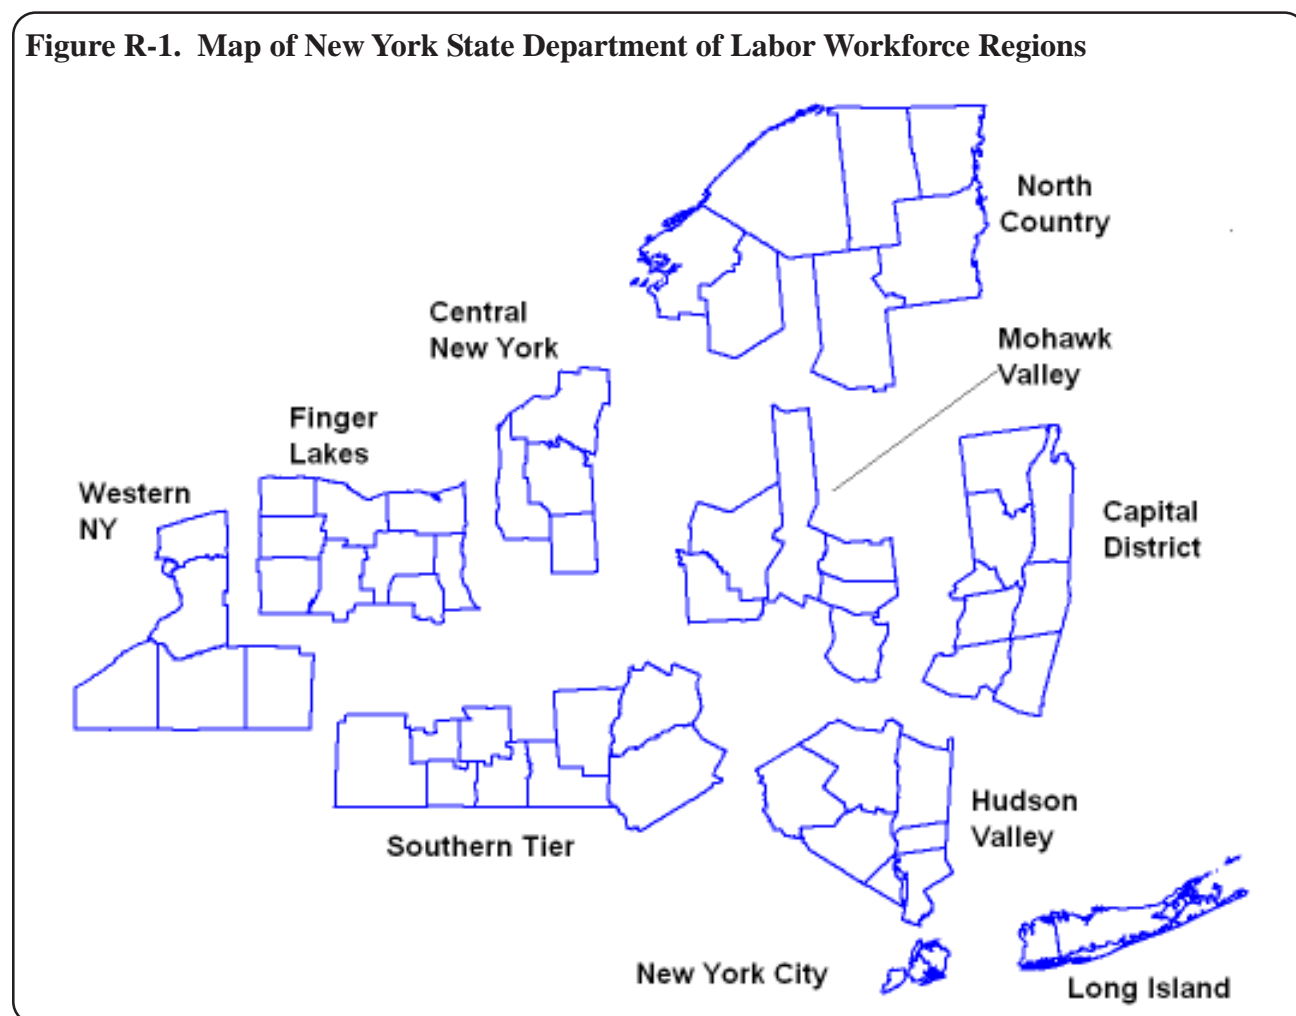

Table R-1. New York State Department of Labor Workforce Regions

<u>Region</u>	<u>Counties Included</u>
Capital District	Albany, Columbia, Greene, Rensselaer, Saratoga, Schenectady, Warren, and Washington
Central New York	Cayuga, Cortland, Onondaga, and Oswego
Finger Lakes	Genesee, Livingston, Monroe, Ontario, Orleans, Wayne, Wyoming, and Yates

SPECIALTY PROFILES

This page intentionally left blank.

SPECIALTY PROFILES

The pages that follow are a series of statistical profiles for the specialties identified in the survey questionnaire. Each profile displays basic data on the numbers and demographic composition of the specialties, as well as the tabulations describing practice patterns for specialists across the state.

The tabulations are estimates for active patient care physicians. Physicians reporting no patient care have been excluded from the tabulations, as have medical residents.

The profiles show clearly the wide variations in both demographic characteristics and practice patterns across the specialty categories. Only a few generalizations can be made across the specialties.

- ❖ Men outnumbered women in all of the specialty categories except General Pediatrics (54%). Surgical specialists have the largest percentage of men, ranging from 81% in Ophthalmology to 96% for Neurological Surgery and Urology.
- ❖ The percentages of physicians who are women are larger for younger age groups. The number of women in General Pediatrics who are less than 44 years old is more than double the number of men in the same age group.
- ❖ Nearly all the specialties have age distributions that reflect growth over the last two decades. Many specialties also have age distributions that reflect the aging of the physician population. The number of physicians in the 55 years of age and older groups are larger than the number of physicians in the younger age groups in a number of specialties. If these patterns continue, the supply of physicians in these specialties will begin to shrink over the next two decades.
- ❖ African Americans, Hispanics, and Native Americans as a group are underrepresented in all of the medical specialties, representing between 2% (Allergy and Immunology) to 18% (Obstetrics and Gynecology) of total specialists. These groups make up a combined total of approximately 35% of New York's population.

APPENDIX B: DATA AND METHODS

This page intentionally left blank.

APPENDIX B: DATA AND METHODS

1. File Descriptions

Five different data files have been created from the survey response data. All of the tabulations in this report are of active patient care physicians (File E). Since File E was created by adjusting the other four files, each of the files is described below. State physician estimates for each of the files is presented in Figure B-1.

A	Baseline Survey Response File		48,090
	<i>Less Inactive and Retired Work Status (Q5) and less Blank Work Status with no Practice Location (Q10) and no Patient Care Hours (Q7)</i>		<u>- 2,876</u>
B	Physicians Active in Medicine		45,214
	<i>Less Physicians with only out-of-state Practice Locations (Q10)</i>		<u>- 4,961</u>
C	Active in Medicine in NYS		40,253
	<i>Less Residents (Q6)</i>		<u>- 1,041</u>
D	Active in Medicine in NYS, less Residents		39,212
	<i>Less no Patient Care Hours (Q7)</i>		<u>- 605</u>
E	Active Patient Care Physicians in NYS		38,607
	<i>Adjust for non-response and out-of-state Practice Locations</i>	<i>1.6109*</i> <i>x 0.9954**</i>	<i>x 1.604</i>
	Weighted Active Patient Care Physicians in NYS		61,905

* $77,471/48,090 = 1.6109$

** $10.4\% \text{ out-of-state} \times 4.5\% \text{ unknown Practice Location} = .9954$

Figure B-1. Estimates of Physician Counts in New York, 2004

2. FTE Estimates

The FTE estimates have been calculated as follows:

FTE = Patient Care Hours / 40, where Patient Care Hours (Q6) have been estimated by assigning a minimum and maximum value to each Patient Care Hours category (see below) and then making a random draw from a uniform distribution between these minimum and maximum points for each respondent.

<u>Hours/Week</u>	<u>Min.</u>	<u>Max.</u>
None	—	—
1 – 9	1	9
10 – 19	10	19
20 – 29	20	29
30 – 39	30	39
40 +	40	59
